Mopane CBS — Accounting Module

User Handbook

Product Mopane Core Banking System (CBS)
Interface Mopane CBS web app
Platform Apache Fineract / Mifos X — release 17.07.01.RELEASE
Audience Accountants, finance officers, branch operations staff, administrators

This handbook explains how accounting works in Mopane CBS: what the system posts for you, what you post by hand, and how to close a period and produce financial statements. Screen names, buttons and field labels match what you see in the web app. Where your institution's chart of accounts, codes, products or branch names differ from the examples, use your own.

About this handbook

This handbook explains how accounting works in Mopane CBS: what the system posts for you, what you post by hand, and how to close a period and produce financial statements.

Screen names, buttons and field labels match what you see in the Mopane CBS web app. Where your institution's chart of accounts, account codes, products or branch names differ from the examples, use your own — the examples here are illustrative only.

If you are	Start with
New to the module	Part 1 (concepts) and Part 2 (where everything lives), then work forward
Posting day to day	Part 5 (manual journals and teller cash) and section 7.2 (daily rhythm)
Setting the system up	Part 3 (chart of accounts and go-live) and Part 4 (product mappings)
Closing a period	Part 6 (accruals, provisioning, closures) and Part 7 (reports and month-end)
Investigating a problem	Section 7.3 (troubleshooting) and the Appendix (screen map)

What you need before you can post anything:

- A login to your institution's Mopane CBS system, with accounting permissions granted by your administrator.
- Knowledge of how to open a client and a loan account.
- A basic understanding that every entry has an equal debit and credit.

Part 1 — Accounting concepts you need

1. Double-entry, always

Every journal in Mopane CBS is a balanced set of debit and credit lines that share one **transaction ID**. The system will not save a manual journal unless total debits equal total credits.

Typical natural balances:

Account type	Increases with	Decreases with	Examples
Asset	Debit	Credit	Cash, bank, loan portfolio, interest receivable
Liability	Credit	Debit	Savings control, overpayment liability, provisions
Equity	Credit	Debit	Capital, opening-balance contra, retained earnings
Income	Credit	Debit	Interest income, fee income, penalty income
Expense	Debit	Credit	Interest on savings, write-offs, provisioning expense

2. Header vs Detail accounts

Usage	Purpose	Can you post to it?
Header	Folder / grouping (for example “Cash and Bank”)	No
Detail	The actual GL account (for example “Cash on Hand — Main Branch”)	Yes

Only **Detail** accounts appear in journal-entry pickers. If a parent needs children under it, the parent must stay a Header.

3. Automatic vs manual journals

Source	When it posts	Where you see it
Loan / savings / deposit / share products	When you disburse, repay, deposit, withdraw, charge, write off, accrue, and so on	Loan or savings transaction → journal; also **Accounting → Search Journal Entries**
Manual journal	When a user clicks **Save** on **Add Journal Entries**	Search Journal Entries (filter **Manual**)
Frequent posting	When a user posts using a predefined **Accounting Rule**	Same as a manual journal, but constrained to the rule's accounts
Opening balances	Once, per office and currency, at go-live	Opening-balance contra plus each GL
Provisioning entry	When you create a provisioning run and tick **Create Journal Entries**	Provisioning journals

4. Four accounting rules on products

Set on the **Accounting** step of a loan, savings, fixed deposit, recurring deposit, or share product.

Option in the UI	Meaning	Typical use
None	Portfolio works; **no GL**	Testing, or products you do not want on the books
Cash	Income is recognised when cash is received; expenses when cash is paid	The most common choice at microfinance institutions
Accrual (periodic)	Interest, fees, and penalties are accrued up to a chosen date (a scheduled job, or **Accounting → Accruals**)	When the books must show earned-but-unpaid income
Accrual (upfront)	Accrual journals are posted at **disbursement** for the expected income	Less common; only if finance has chosen this policy

5. Office and currency

- Journals belong to an **office** (branch). Closures are also per office.
- Journals belong to a **currency**. A USD loan does not post to a ZWL cash account.
- Your institution has its own chart of accounts, products and books, separate from every other institution on the platform.

6. Accounting closures freeze the past

When an office is closed as at a date, **no** journal (automatic or manual) may be posted on or before that date. To backdate, the closure must be deleted first. Closures are a control, not a report.

Part 2 — Finding Accounting in the web app

Top menu

On the black toolbar, click **Accounting**. That opens the Accounting home page (`#/accounting`).

The **Reports** menu (same toolbar) has a sub-item **Accounting** (`#/reports/accounting`) for Trial Balance, Income Statement, Balance Sheet, and General Ledger.

Accounting home — what each tile does

The home page is two columns of tiles. Users only see tiles their role is allowed to open.

Left column (daily work)

Tile (screen title)	What it is for	Permission
Frequent Postings	Post a recurring journal using a saved rule (cashier-friendly)	`CREATE_JOURNALENTRY`
Add Journal Entries	Free-form debit/credit journal	`CREATE_JOURNALENTRY`
Search Journal Entries	Find, inspect, and reverse journals	`READ_JOURNALENTRY`
Accounts Linked to Financial Activities	Map system activities (cash at teller, opening-balance contra, transfers) to GL accounts	`READ_FINANCIALACTIVITYACCOUNT`
Migrate Opening Balances (Office-wise)	Load starting GL balances at go-live	`READ_JOURNALENTRY` to open; `DEFINEOPENINGBALANCE_JOURNALENTRY` to save

Right column (setup and period-end)

Tile (screen title)	What it is for	Permission
Chart of Accounts	Create and maintain GL accounts	`READ_GLACCOUNT`
Closing Entries	Freeze journals up to a date, per office	`READ_GLCLOSURE`
Accounting Rules	Templates used by Frequent Postings	`READ_ACCOUNTINGRULE`
Accruals	Run periodic accruals up to a date	`EXECUTE_PERIODICACCRUALACCOUNTING`
Provisioning Entries	Create and review loan-loss provisioning runs	`VIEW_PROVISIONING_ENTRIES`

Shortcuts on the left navigation

The left rail also has **Frequent Postings**, **Add Journal Entries**, **Closing Entries**, and **Chart of Accounts**. Same screens, fewer clicks.

Breadcrumbs

Every Accounting screen starts with **Accounting** in the breadcrumb. Use it to return to the home page.

Part 3 — Chart of Accounts and go-live setup

This part must be completed before any live lending with accounting enabled. Work through it in this order:

1. Create the Chart of Accounts.
2. Map the **Opening Balance Transfer Contra** under Accounts Linked to Financial Activities.
3. Migrate opening balances (office by office, currency by currency).
4. Map products (Part 4).

Do not enable accounting on products, and do not post journals, **before** opening balances are in — the system will refuse opening balances once accounting-enabled products already have accounts.

3.1. Chart of Accounts

Path: Accounting → **Chart of Accounts**

List view vs Tree view

- **List view** (default): table of Account, GL Code, Account type, Disabled?, Manual entries allowed, Used as (Header/Detail). Filter box: *Filter by Account / GL Code / Account type*.
- **Tree view** (blue button, top right): hierarchy. Click a node to see GL code, type, usage, manual-entries flag, and description.

Click a row to open the account detail page.

Create a GL account

Path: Chart of Accounts → **Add Account**

Field	Required?	How to fill it
Account Type	Yes	Asset, Liability, Equity, Income, or Expense
Parent	No	The Header this account sits under. Parent must be the same type.
GL Code	Yes	Unique code (for example `1110`, `4100`). Agree a numbering scheme before you start creating accounts.
Account name	Yes	Short name as it should appear on statements
Account Usage	Yes	**Header** or **Detail**
Tag	No	Optional classification (Cash, Bank, Portfolio). Tags are maintained under **Admin → System → Manage Codes** (`AssetAccountTags`, `LiabilityAccountTags`, `EquityAccountTags`, `IncomeAccountTags`, `ExpenseAccountTags`).
Manual entries allowed	—	Tick if accountants may post to this account by hand. **Untick** for control accounts that should only be posted by the system (loan portfolio, savings control).
Description	No	What the account is for

Rules to teach:

- Build **all Headers for a type first**, then Detail accounts under them. Repeat for Asset, Liability, Equity, Income, Expense.
- You cannot create a child under a Detail account. If you need a child, the parent must be a Header.
- Do not reuse GL codes. Codes are unique.
- Disable an account instead of deleting it once it has history.

Edit, disable, enable, delete, add child

On the account detail page:

Button	Use
Add Child Account	Only on Header accounts
Disable / Enable	Stops or resumes new use of the account
Edit	Change name, parent, tag, manual-entries flag, description (use care if already mapped)
Delete	Only if unused. Confirm in the popup.

A minimum workable chart

This is the smallest chart that supports lending, savings and a trial balance. Adapt the codes and names to your institution's own chart.

Type	Header	Detail examples
Asset	Cash and Bank	Cash on Hand; Bank — Current; Cash at Teller
Asset	Loan Portfolio	Gross Loan Portfolio
Asset	Receivables	Interest Receivable; Fees Receivable; Penalties Receivable
Liability	Customer Deposits	Savings Control
Liability	Other Liabilities	Overpayments; Loan Loss Provision
Equity	Capital and Reserves	Opening Balances Contra; Retained Earnings
Income	Lending income	Interest on Loans; Fees; Penalties; Recoveries
Expense	Lending expense	Write-offs; Interest on Savings; Provisioning expense

3.2. Accounts Linked to Financial Activities

Path: Accounting → **Accounts Linked to Financial Activities** → **Define New Mapping**

The system needs certain GL accounts for **internal** movements (not product mappings). Each financial activity maps to **one** GL account of the correct type.

Financial activity	Must map to	When it is used
Opening Balances Transfer Contra	Equity	Contra side of opening-balance journals. **Required before migrating opening balances.**
Cash at Main Vault	Asset	Teller / vault cash movements
Cash at Teller	Asset	Teller cash
Asset Transfer	Asset	Loan-to-loan and similar asset transfers
Liability Transfer	Liability	Account transfers involving liability accounts (for example savings-funded disbursement)
Fund Source	Asset	Default funding source in some transfer flows
Payable Dividends	Liability	Share-product dividend payables

3.3. Migrate Opening Balances (Office-wise)

Path: Accounting → **Migrate Opening Balances (Office-wise)**

Use this **once per office and currency** when moving from a previous ledger (or from zero) onto Mopane CBS.

Steps

1. Select **Office** and **Currency**.
2. Click **Search Data**.
3. Confirm the **Opening balances contra account** shown is the Equity account you mapped.
4. Enter **Date of opening balances**.
5. For each Detail GL, enter either a **Debit** or a **Credit** (not both on the same line).
6. Watch the running totals in the column headings. **Total debits must equal total credits.** The contra account absorbs the balancing figure when you submit.
7. Click **Save** (`DEFINEOPENINGBALANCE_JOURNALENTRY`).

Hard rules (teach these)

- Opening balances must be set **before** any other journals, and **before** accounting-enabled loan or savings products have live accounts.
- Repeat the screen for each office and each currency (USD separately from ZWL).
- Do not treat this as a monthly recast. After go-live, use normal journals and period close.

3.4. Bulk import (optional, admins)

For a large chart, use **Admin** → **Organisation** → **Bulk Import**:

- **Import Chart of Accounts** — download the Excel template, fill, upload, refresh the import grid.
- **Import Journal Entries** — same pattern for a batch of manuals.

There is also a Mopane-side workbook at `docs/templates/CBS_Accounting_Import_Template.xlsx` for structured GL loading. Prefer the in-app template when importing through the UI so column names match what the server expects.

3.5. Payment types (do this before product mappings)

Path: Admin → Organisation → **Manage Payment Types** (`#/viewpaymenttype/`)

Payment types are the channels money can arrive or leave on: Cash, Cheque, Bank transfer, EcoCash, OneMoney, Payroll / SSB deduction.

Field	Notes
Payment type name	What the teller picks on a repayment, deposit or journal
Description	Optional
Is cash payment	Tick for physical cash. Cash and teller reports rely on this flag.
Position	Order in the dropdown

Do this **before** you map products in Part 4. The product-level **fund source for payment channel** mapping lists exactly these payment types. If they do not exist, every channel posts to the product's single default fund source, and separating bank from cash becomes a manual reconciliation each month.

Part 4 — Product accounting and automatic journals

This is the most important part of the handbook. If products are mapped correctly, most of the general ledger looks after itself.

Path for loans: Admin → Products → **Loan Products** → create or edit → wizard step **Accounting**

The same **Accounting** step exists on Savings, Fixed Deposit, Recurring Deposit, and Share products.

4.1. Loan product — Accounting step

Four radio buttons: **None**, **Cash**, **Accrual (periodic)**, **Accrual (upfront)**.

When anything other than None is selected, mapping dropdowns appear.

Asset mappings (all enabled modes)

UI label	Typical GL	What it does
Fund source	Bank or Cash	Credited on disbursement; debited on repayment (cash in)
Loan portfolio	Gross loans	Debited on disbursement; credited when principal is repaid or written off
Transfers in suspense	Suspense asset	Used while a loan is in transfer between offices
Receivable interest	Interest receivable	**Accrual only** — holds accrued interest until paid
Receivable fees	Fees receivable	**Accrual only**
Receivable penalties	Penalties receivable	**Accrual only**

Income mappings

UI label	Typical GL	What it does
Income from interest	Interest income	Credited when interest is recognised (on cash receipt, or on accrual then reversed into cash on payment)
Income from fees	Fee income	Credited when fees are recognised
Income from penalties	Penalty income	Credited when penalties are recognised
Recovery payments	Recovery income	Credited on recovery of a written-off loan

Expense and liability

UI label	Typical GL	What it does
Losses written off	Write-off expense	Debited on principal write-off (accrual also writes off interest/fees/penalties through this account)
Over payment liability	Overpayments	Credited when the client pays more than is due; debited when you refund

Advanced accounting rules (click to expand)

Use these when one product needs **exceptions**:

1. **Configure fund sources for payment channels** — Payment type (Cash, Cheque, EcoCash, Bank transfer) → a specific asset account. Example: Cheque repayments debit **Bank**, cash repayments debit **Cash on Hand**.
2. **Map fees to income accounts** — a named fee (arrangement fee, insurance) to its own income (or liability) account instead of the product default.

3. **Map penalties to specific income accounts** — same idea for penalties.

Every mapping field on this screen carries a **?** icon. Hover it before you guess: the tooltips describe exactly what the account is used for.

4.2. Worked example — cash accounting, USD 1,000 loan

Assume:

- Fund source = Bank 1120
- Loan portfolio = 1210
- Income from interest = 4100
- Income from fees = 4200
- Losses written off = 5100
- Overpayment liability = 2300

Disbursement of 1,000

Debit	Credit
Loan portfolio 1,000	Bank 1,000

Repayment of 120 (100 principal + 20 interest)

Debit	Credit
Bank 120	Loan portfolio 100
	Interest income 20

Fee of 15 paid with the repayment (total cash 135)

Debit	Credit
Bank 135	Loan portfolio 100
	Interest income 20
	Fee income 15

Write-off of remaining principal 900

Debit	Credit
Write-off expense 900	Loan portfolio 900

Recovery of 50 after write-off

Debit	Credit
Bank 50	Recovery income 50

Overpayment of 30 on a fully paid loan

The extra 30 credits **Over payment liability**. A later refund debits that liability and credits Bank.

4.3. Mopane-specific: capitalised fees

Mopane CBS can add a **capitalised fee** that increases loan principal instead of being collected as a separate charge.

Cash journals for a capitalised fee:

Debit	Credit
Loan portfolio (fee amount)	Income from fees (fee amount)

There is no cash movement at that moment. Principal (and therefore the schedule) goes up; fee income is recognised immediately under cash accounting.

4.4. Other Mopane-specific behaviour finance should know

Feature	What accounting sees	Where to look
Capitalised fee	A distinct **Capitalised fee** loan transaction (type 21). Journal: **Dr Loan portfolio / Cr Income from fees**, under both cash and accrual. No cash moves.	Loan → transactions; then Search Journal Entries by that transaction ID
SSB / Pensions RES import	When the bureau response is SUCCESS and the loan is Approved, the loan **auto-disburses** (config `ssb-res-auto-disburse`). That disbursement posts the normal journal: Dr Loan portfolio / Cr Fund source.	Reports → SSB/Pensions RES import batches; then the loan's disbursement journals
SSB / Pensions PAY import	Imported repayments post as ordinary loan repayments, with their normal journals. Rows in *Needs Review* post **nothing** until approved.	PAY import batch → review queue
Office short codes	Every office carries a mandatory short code that prefixes client and account numbers. It does not change any journal, but it is how you tell at a glance which branch an account belongs to.	Admin → Organisation → Manage Offices
Dashboard aging	The Mopane dashboard ages portfolio on **overdue principal**. It will not agree line-for-line with a provisioning run that uses different buckets.	Dashboard vs Provisioning Criteria

4.5. Accrual (periodic) — extra journals

Same disbursement as cash (portfolio vs fund source).

When you run accruals (section 6.1), for interest earned but not yet paid:

Debit	Credit
Interest receivable	Interest income

When the client later pays that interest:

Debit	Credit
Bank	Interest receivable

Income was already recognised; cash now clears the receivable. Fees and penalties follow the same pattern with Fees Receivable / Penalties Receivable.

Accrual (upfront) posts those receivable/income journals at **disbursement** for the expected amounts, then adjusts as the loan runs. Only use this if finance policy requires it.

4.6. Savings product — Accounting step

Path: Admin → Products → **Savings Products** → Accounting

Savings products typically offer **None** or **Cash**.

UI label	Type	What it does
Saving reference	Asset (cash/bank)	Debited on deposit; credited on withdrawal
Overdraft portfolio control	Asset	Increases when the client draws an overdraft
Saving control	Liability	The customer deposit book: credited on deposit, debited on withdrawal
Savings transfers in suspense	Liability	Transfers in progress
Escheat liability	Liability	Unclaimed dormant funds (only if dormancy tracking is on)
Interest on savings	Expense	Debited when interest is posted to the client
Write off	Expense	Overdraft write-off
Income from fees / penalties / overdraft interest	Income	Charged to the saver

Deposit 200 cash:

Debit	Credit
Savings reference (cash) 200	Savings control 200

Withdrawal 50: opposite. **Interest posting 5:** debit Interest on savings, credit Savings control.

Fixed deposit and recurring deposit products use the same cash pattern. Share products (if used) map **Shares reference**, **Shares suspense**, **Income from fees**, and **Shares equity**.

4.7. Seeing automatic journals in the UI

1. Open the **loan account**.
2. On a transaction row, open the action that views **journal entries** (the app routes to **View Transaction**, `#/viewtransactions/{id}`).
3. You should see: - Banner: *These journal entries were created by the portfolio transaction…* - Office, transaction date, created by / on - Lines: Entry ID, Type (Asset/Income/…), Account (name and GL code), Debit, Credit
4. Click a line for payment details, reference, comments.
5. **Reverse** is offered only for **manual** journals. To undo a loan repayment, reverse the **loan transaction**, and the system reverses the journals.

Also: Accounting → **Search Journal Entries** → filter by date and office → click the **Transaction ID**. Automatic and manual journals share this screen.

Part 5 — Manual journals, rules, frequent postings and teller cash

5.1. Add Journal Entries

Path: Accounting → **Add Journal Entries** (or left nav)

Use this for anything that is not generated by a product: office rent, salaries, bank charges, petty cash, suspense clearing, year-end adjustments.

Fields

Field	Required	Notes
Office	Yes	Branch the entry belongs to
Currency	Yes	Must match the accounts' currency context
Debit account + amount	Yes	Green **+** adds another debit line
Credit account + amount	Yes	Green **+** adds another credit line
Reference number	No	Cheque number, invoice number, batch ID — encourage a standard
Transaction date	Yes	Cannot be after today; cannot fall on a closed period
Show Payment Details	No	Payment type, account number, cheque, routing code, receipt, bank number
Comments	No	Always write *why*

Only **Detail** accounts with **Manual entries allowed** appear in the lists.

Compound entries

Debits and credits may be many-to-one or many-to-many. Example: pay rent 800 and electricity 200 from bank 1,000 — two debits, one credit.

Click **Save**. The next screen is **View Transaction** with the new transaction number.

Reverse a manual journal

On View Transaction, if it is a manual entry and not already reversed, **Reverse** (`REVERSE_JOURNALENTRY`) asks for comments and posts a reversing journal. The original is marked reversed. You cannot reverse a reversal.

5.2. Accounting Rules

Path: Accounting → **Accounting Rules** → **Add Rule**

A rule is a **template**: which accounts (or tagged lists of accounts) may be debited and credited. Frequent Postings uses rules so non-accountants cannot pick arbitrary GLs.

Fields

Field	Meaning
Accounting rule name	For example `Pay office rent`, `Cash to bank`, `Petty cash replenish`
Office	Scope of the rule
Description	Shown to the person posting
Debit rule type	**Fixed** = one account, or **List** = accounts that have selected **tags**

Field	Meaning
Credit rule type	Same
Allow multiple debit / credit entries	When using tags, allow more than one line

5.3. Frequent Postings

Path: Accounting → **Frequent Postings**

This is the same journal engine as Add Journal Entries, but:

1. Choose **Office**.
2. Choose an **Accounting rule**.
3. Choose **Currency**.
4. The debit and credit account lists shrink to what the rule allows.
5. Enter amounts, date, optional payment details and comments.
6. **Save**.

5.4. Search Journal Entries

Path: Accounting → **Search Journal Entries**

Filters

- Account name or GL code
- Office
- Manual only vs all
- From date / To date
- Transaction ID

Click **Search**. Columns: Entry ID, Office, Transaction date, Transaction ID, Type, Created by, Account, Debit, Credit.

Click any cell to open the full transaction. Use this to answer: “Why is Bank 1120 short today?”

5.5. Teller and cashier cash management (branch cash control)

Path: Admin → Organisation → **Tellers / Cashiers** (`#/tellers`)

Mopane CBS can track physical branch cash — vault versus each cashier's drawer — and posts the movement to the GL automatically.

Setup (once per branch)

1. **Accounting → Accounts Linked to Financial Activities** — map **Cash at Main Vault** and **Cash at Teller** to asset GL accounts. **Both** are required; if either is missing, allocation and settlement fail with a "financial activity account not found" error.
2. **Admin → Organisation → Tellers → Create Teller** — name, office, description, valid-from / valid-to, status.
3. Open the teller → **Cashiers → Create Cashier** — pick the staff member and the period they hold the drawer.

Daily use

Action	Where	Permission	Journal posted
Allocate Cash to a cashier	Teller → Cashiers → cashier → Allocate Cash	`ALLOCATECASHIER_TELLER`	Dr **Cash at Teller** / Cr **Cash at Main Vault**
Settle Cash from a cashier	same screen → Settle Cash	`SETTLECASHFROMCASHIER_TELLER`	Dr **Cash at Main Vault** / Cr **Cash at Teller**
Transactions	Teller → Cashiers → cashier → Transactions (per currency)	`READ_TELLER`	View only

Teach these points:

- Allocation and settlement journals are **system entries, not manual entries**. They carry no **Reverse** button. Fix a mistake with an opposite allocate/settle and write the reason in the note field.
- Cashier transactions are **per currency**. USD and ZWL are separate running balances on separate screens.
- End of day: settle the cashier back to the vault, then agree **Cash at Teller** to zero (or to the agreed float) before anyone goes home.

Daily Teller Cash Report

Path: Reports → **Daily Teller Cash Report** (a Mopane addition, Pentaho, backed by the `CashierTransactionSummary` procedure)

Run it by office, teller, cashier, currency and date. Use it as the cash-up sheet before settling, not after.

Part 6 — Accruals, provisioning and closures

6.1. Periodic accruals

Path: Accounting → **Accruals**

Screen title: **Execute Periodic Accrual Accounting**. One field: **Accrue till** date. Button: **Run Periodic Accruals**.

This only affects loans whose product is **Accrual (periodic)**. It posts interest / fee / penalty accruals up to that date.

Also scheduled under **Admin** → **System** → **Scheduler Jobs**:

Job	Role
Add Accrual Transactions	Accrual processing
Add Periodic Accrual Transactions	Daily periodic accruals (typically shortly after midnight)
Add Accrual Transactions For Loans With Income Posted As Transactions	Loans that post income as transactions
Update Accounting Running Balances	Keeps GL running balances current for reports

After a run: Search Journal Entries for the date; filter the receivable accounts. On the loan, tick **Accrual** on the transactions filter to see accrual rows.

6.2. Loan-loss provisioning

Two stages.

Stage 1 — Criteria (setup, once)

Path: Admin → Organisation → **Provisioning Criteria**

For each arrears bucket (provisioning category):

- Minimum age / maximum age in **days** overdue
- Provisioning **percentage**
- **Liability account** (Loan Loss Provision)
- **Expense account** (Provisioning expense)
- Which **loan products** the criteria apply to

Align buckets with the institution's policy and, where relevant, RBZ expectations.

Stage 2 — Entries (usually month-end)

Path: Accounting → **Provisioning Entries** → **Create Provisioning Entry**

1. Choose the **date**.
2. Optionally tick **Create Journal Entries** (debit expense, credit provision liability).
3. **Save**.

On the list you can **View** the calculated report, **Recreate** (only if journals were not yet created), or **View journals** once they exist.

A scheduler job **Generate Loan Loss Provisioning** can automate the calculation; journals still need a controlled month-end process.

6.3. Closing Entries

Path: Accounting → **Closing Entries** → **Create Closure**

Field	Notes
Office	One closure per office. The form shows **Previously closed on** when you pick the office.
Closing date	Last date included in the closed period
Comments	For example “August 2026 month-end”

After close, any journal (including a loan repayment) dated on or before that date fails with an accounting-closed error.

To backdate: Closing Entries → open the closure → **Delete** → confirm → post the backdated transaction → **recreate the closure**. Deleting a closure is a controlled exception, not a habit.

Suggested policy: restrict the delete-closure permission to head office finance, and have branches request a reopening in writing. A closure that anyone can delete is not a control.

Part 7 — Reports, month-end and troubleshooting

7.1. Accounting reports

Path: Reports → **Accounting** (`#/reports/accounting`)

Four reports are registered in the **Accounting** category. All four are **Pentaho** reports, so the Pentaho reporting plugin and the `.prpt` files must be installed on the server. If a report opens but returns an error or a blank page, that is an IT/server issue, not a data issue.

Report name (exactly as listed)	Parameters	Use
Trial Balance	Office, from / to date	Debits and credits by GL for a period; must balance
Income Statement	Office, from / to date	Profit and loss (income and expense)
Balance Sheet	Office, as-at date	Assets, liabilities, equity at a point in time
GeneralLedgerReport	Office, **GL account** (or ALL), from / to date	Movements and running balance on selected accounts

Open a report, fill office / dates / account / output format (HTML, PDF, Excel, CSV), then run it.

Trial Balance is the control report. If it does not balance, stop and investigate before closing the period.

Operational reports finance also needs

These sit under other **Reports** categories, not under Accounting:

Report	Category	Why finance wants it
Daily Teller Cash Report	Mopane addition	Cash-up per teller and cashier before settlement
All Loans	Loan (Mopane addition)	Every loan including closed, written-off and rejected — reconciles portfolio movement, unlike *Active Loans - Details*
Written-Off Loans	Loan	Agrees write-off expense to the portfolio
Portfolio at Risk / Aging	Loan	Feeds provisioning percentages
Collection and disbursal reports	Loan / Client	Ties cash movement to portfolio activity

RBZ Form MFI-1 and the **SSB / Pensions** screens are Mopane-specific regulatory and payroll items under **Reports**. They read the portfolio; they are not the general ledger and they do not post journals.

7.2. Recommended operating rhythm

Daily (branch)

1. Post teller and cash movements with **Frequent Postings** (or Add Journal Entries if no rule exists).
2. Complete all loan disbursements, repayments, savings deposits and withdrawals — journals follow automatically.
3. **Search Journal Entries** for the branch and today's date. Investigate anything unexpected.
4. If using tellers, reconcile **Cash at Teller** to physical cash.

Month-end (finance)

1. Confirm all portfolio transactions for the month are posted (no pending collection sheets).

2. If using accrual products: **Accruals** with **Accrue till** = last day of the month (or rely on the scheduler, then spot-check).
3. **Provisioning Entries** as at month-end; create journals if policy requires.
4. Post remaining manuals (accrued expenses, bank charges, depreciation if used).
5. Run **Trial Balance**, **Income Statement**, **Balance Sheet**, **General Ledger**.
6. Investigate unbalances, suspense, and unusual income.
7. **Closing Entries** for each office as at month-end.
8. Archive PDF statements.

Year-end

- Same as month-end, with extra care on income/expense close to retained earnings if you post that manually.
- Do not “re-migrate opening balances” for a new year. Opening balances are a go-live tool.

7.3. Troubleshooting

Symptom	Likely cause	What to do
Loan disbursed but GL did not move	Product Accounting = **None**, or mappings blank	Edit the **product** (future loans). Existing loans follow the product they were created with.
“Accounting is closed as of …”	Office has a closing entry on or after that date	Delete the closure (authorised user), post, recreate closure
Cannot save opening balances	Journals already exist, or accounting-enabled products already have accounts, or contra mapping missing	Complete the contra mapping first; opening balances can only be loaded before any other journals exist
Debits ≠ credits on a manual journal	Amounts do not match; extra line not removed	Fix amounts; the server rejects unbalanced entries
Account missing from journal dropdown	Header account, disabled, or **Manual entries allowed** is off	Use a Detail account; enable manual entries if appropriate
Tile missing on Accounting home	Role lacks permission	Admin → Users → Roles; grant the codes in the appendix
Wrong bank account on EcoCash vs cash	Advanced **payment channel** mapping not set	Map payment types on the product
Accrual ran but no journals	Products are Cash, or accrue-till date has no unaccrued income	Check product rule; check loan schedule
Trial Balance off by currency	Mixed USD and ZWL in one mental total	Always filter by currency
Capitalised fee not in “Fees Charged”	Mopane posts **Capitalised fee**, not a cash fee	Inspect that transaction’s journals: Dr Portfolio, Cr Fee income
Allocate / Settle Cash button fails	**Cash at Main Vault** or **Cash at Teller** financial activity not mapped	Map both under Accounts Linked to Financial Activities
Teller allocation posted to the wrong cashier, no Reverse button	Teller journals are system entries, not manual	Post the opposite allocate/settle with a note; do not hand-journal around it
Accounting report errors or returns a blank page	Pentaho plugin or `.prpt` file missing on the server	Raise with IT — not a data problem
Journal saved but “pending approval”, GL unchanged	Maker-checker is enabled on that permission	A checker must approve it under Admin → System → Audit Trails

7.4. Permissions (for administrators)

Grant via **Admin** → **Users** → **Roles**. Accounting tiles hide when the user lacks the read/create permission.

Typical branch accountant

- `READ_GLACCOUNT`, `READ_JOURNALENTRY`, `CREATE_JOURNALENTRY`, `REVERSE_JOURNALENTRY`
- `READ_ACCOUNTINGRULE`
- `READ_GLCLOSURE` (create/delete only if policy allows)
- Report reads: `READ_Trial Balance`, `READ_Income Statement`, `READ_Balance Sheet`, `READ_REPORT`

Typical Head Office finance / GL admin — all of the above, plus:

- `CREATE_GLACCOUNT`, `UPDATE_GLACCOUNT`, `DELETE_GLACCOUNT`
- `CREATE_ACCOUNTINGRULE`, `UPDATE_ACCOUNTINGRULE`, `DELETE_ACCOUNTINGRULE`
- `CREATE_GLCLOSURE`, `DELETE_GLCLOSURE`
- `CREATE_FINANCIALACTIVITYACCOUNT`, `READ_FINANCIALACTIVITYACCOUNT`
- `DEFINEOPENINGBALANCE_JOURNALENTRY`
- `EXECUTE_PERIODICACCRUALACCOUNTING`
- Provisioning: `CREATE_PROVISIONING_CRITERIA`, `VIEW_PROVISIONING_ENTRIES`, `CREATE_PROVISIONING_ENTRIES`
- `UPDATERUNNINGBALANCE_JOURNALENTRY` if they run the running-balance job

Maker-checker can be enabled on several of these codes. If a journal sits in **Tasks**, a checker must approve it before it hits the GL.

7.5. Maker-checker and the audit trail

Maker-checker (four eyes)

Path: Admin → System → **Configure Maker Checker Tasks** (`#/makerchecker`)

Choose a grouping (for example Accounting or Portfolio) and tick the permissions that must be checked. Once a permission is under maker-checker:

1. The maker saves as normal and gets a *pending approval* result.
2. **Nothing reaches the GL yet.**
3. A checker reviews and **Approves** or **Rejects**.

Worth enabling at most institutions: `CREATE_JOURNALENTRY`, `REVERSE_JOURNALENTRY`, `DELETE_GLCLOSURE`, `DEFINEOPENINGBALANCE_JOURNALENTRY`.

The checker needs the matching checker permission, and no one can check their own entry. Remember this when an entry seems not to have saved: a pending journal has saved, it is simply waiting for its checker.

Audit trails

Path: Admin → System → **Audit Trails** (`#/audit`)

Filter by user, action, entity, resource ID and date. Every accounting command — create journal, reverse, create or delete a closure, GL account changes — is recorded with the exact payload that was submitted. This is the screen that answers "who posted this, when, and what did they send".

Part 8 — Glossary

Term	Meaning in Mopane CBS
GL / Chart of Accounts	The list of Header and Detail accounts the books use
Journal entry	One balanced set of debit and credit lines sharing a transaction ID
Transaction ID	Identifier that groups all lines of one event (one disbursement, one manual, one reversal)
Fund source	Asset account representing the money that leaves or arrives (bank, cash, mobile money)
Loan portfolio	Asset account for outstanding principal
Savings control	Liability account for customer deposit balances
Accounting rule (product)	None / Cash / Accrual periodic / Accrual upfront on the product
Accounting rule (posting template)	Saved debit/credit pattern used by Frequent Postings
Closure	Freeze of an office's books up to a date
Accrual	Recognising income or expense before cash moves
Provisioning	Booking expected loan losses from arrears buckets
Running balance	Balance stored on journal lines for reporting; updated by the running-balance job
Manual entries allowed	Whether users may pick this GL on Add Journal Entries
Teller / Cashier	Branch cash desk and the staff member holding the drawer; allocations and settlements post GL journals automatically
Maker-checker	Four-eyes control — the maker's entry waits for a checker before it reaches the GL
Payment type	The channel a transaction arrived on (cash, cheque, EcoCash), used for channel-specific fund-source mapping
Capitalised fee	A Mopane fee that increases loan principal: Dr Loan portfolio / Cr Income from fees, no cash movement

Appendix — Screen map (for system administrators)

User-facing title	Route	Main permission
Accounting home	`#/accounting`	(tiles gated individually)
Frequent Postings	`#/freqposting`	`CREATE_JOURNALENTRY`
Add Journal Entries	`#/journalentry`	`CREATE_JOURNALENTRY`
Search Journal Entries	`#/searchtransaction`	`READ_JOURNALENTRY`
View Transaction	`#/viewtransactions/:id`	`READ_JOURNALENTRY` / `REVERSE_JOURNALENTRY`
Accounts Linked to Financial Activities	`#/financialactivityaccountmappings`	`READ_FINANCIALACTIVITYACCOUNT`
Migrate Opening Balances	`#/openingbalances`	`DEFINEOPENINGBALANCE_JOURNALENTRY`
Chart of Accounts	`#/accounting_coa`	`READ_GLACCOUNT`
Create GL Account	`#/createglaccount`	`CREATE_GLACCOUNT`
Closing Entries	`#/accounts_closure`	`READ_GLCLOSURE`
Create Closure	`#/createclosure`	`CREATE_GLCLOSURE`
Accounting Rules	`#/accounting_rules`	`READ_ACCOUNTINGRULE`
Accruals	`#/run_periodic_accrual`	`EXECUTE_PERIODICACCRUALACCOUNTING`
Provisioning Entries	`#/viewprovisioningentries`	`VIEW_PROVISIONING_ENTRIES`
Provisioning Criteria	`#/viewallprovisionings`	Organisation menu
Accounting reports	`#/reports/accounting`	`READ_REPORT`
Bulk import COA	`#/bulkimportcoa`	Bulk import permissions
Bulk import journals	`#/bulkimportjournalentries`	Bulk import permissions
Tellers / Cashiers	`#/tellers`	`READ_TELLER`
Allocate / Settle cashier cash	`#/tellers/:tellerId/cashiers/:cashierId/actions/:action`	`ALLOCATECASHIER_TELLER` / `SETTLECASHFROMCASHIER_TELLER`
Cashier transactions	`#/tellers/:tellerId/cashiers/:cashierId/txns/:currencyCode`	`READ_TELLER`
Manage Payment Types	`#/viewpaymenttype/`	`READ_PAYMENTTYPE`
Configure Maker Checker Tasks	`#/makerchecker`	`READ_PERMISSION` / `PERMISSIONS_ROLE`
Audit Trails	`#/audit`	`READ_AUDIT`
Currency configuration	`#/currencyconfig`	`READ_CURRENCY`

References — the upstream manuals

Mopane CBS accounting behaviour follows Mifos X / Apache Fineract 17.07. Official user-manual pages that match these screens:

- Accounting (setup overview)
- Chart of Accounts
- Opening balances
- Add Journal Entries
- Frequent Postings
- Closing Entries
- Accruals
- Loan products — Accounting
- Accounts linked to Financial Activities
- Accounting Rules
- Accounting operations (web app)

The upstream setup order is the same one used in Part 3: chart of accounts → map the opening-balance contra → migrate opening balances office by office → map products.

Where Mopane differs (capitalised fees, teller cash reports, office short codes, RBZ / SSB features), this guide takes precedence.

Mopane CBS Accounting Module — User Handbook. Screen labels and posting rules reflect the Mopane CBS release named on the cover. If a screen in your system differs from this handbook, your system may be on a different release — check with your administrator.
